SALES PRESENTATION

Moisture Problems in Homes

High humidity is common in European homes, especially in bathrooms, living rooms, and bedrooms. This can lead to mold growth, structural damage, and increased allergens. A family of four generates up to 10 liters of moisture daily. Proper ventilation and dehumidification help prevent these issues.

Consequences of Untreated Moisture

- Mold and Odors: Mold spreads quickly, damaging the indoor environment.
- Health Issues: Poor air quality affects residents' health.
- Economic Impact: High costs for remediation and repairs.
